

### **Inner Eye Diagram Label**

The retina is the innermost, light-sensitive layer of tissue of the eye of most vertebrates and some molluscs. The optics of the eye create a focused two-dimensional image of the visual world on the retina, which translates that image into electrical neural impulses to the brain to create visual perception, the retina serving a function analogous to that of the film or image sensor in a camera.

The trabecular meshwork is an area of tissue in the eye located around the base of the cornea, near the ciliary body, and is responsible for draining the aqueous humor from the eye via the anterior chamber (the chamber on the front of the eye covered by the cornea).. The tissue is spongy and lined by trabeculocytes; it allows fluid to drain into a set of tubes called Schlemm's canal flowing ...

Electromagnetic radiation is reflected or absorbed mainly by several gases in the Earth's atmosphere, among the most important being water vapor, carbon dioxide, and ozone.

### **Introduction to the Electromagnetic Spectrum | Science ...**

The greatest elongation for the two inferior planets, Mercury and Venus, occurs when the line from the Earth to the inferior planet is at a tangent to the Sun. That's when the Sun-Earth-(inferior)planet angle is greatest. In my drawing here, I show the inner planet close to, but NOT at, greatest elongation - because my drawing program has trouble lining up the tangent.
