If you read about relays, you will learn that an electromagnet is a chunk of metal (usually iron), wrapped with a great deal of wire. When an electrical current flows through the wire, a magnetic field is produced. A guitar pickup is the reverse of this whereby we start with a magnet and wrap a huge amount of wire around it (thousands of turns, usually).

When we started working with Billy Corgan on the pickups for his signature Strat®, we sent him several models to try out. He liked the Air Norton S™ in the neck, The Chopper™ in the middle and The Tone Zone® S in the bridge. After playing them on several gigs, he asked for some changes in the neck and bridge pickups. He wanted a deeper sound from the low strings without losing any punch ...

"Just thought I'd drop you a line to sing the praises of the set of IronGear Rolling Mill pickups I bought from you a few weeks ago. I've just finished setting up and testing them and I'm utterly floored by the quality of the build and materials, and consistency and depth of the tone they deliver. I bought the pair (overwound bridge and standard neck) to replace the woolly and unresponsive ...

The history behind the development of the Stratocaster Plus Series is quite interesting. We will discuss this in depth in a bit. As mentioned, the Series was going to be the first Fender Strats with the new Gold Lace Sensor pickups and the premier "roller-nut" designed by an English chap by the name of Trevor Wilkinson. By the way, when Trevor finally patented his roller nut, he was living in ...
